Message from the Provost

Christian Wagner

Provost

Welcome to CityU's second issue of the **BOLD** magazine! It has been four months since the inaugural issue. Many exciting developments have taken place at CityU in the meantime, developments which enabled you, as a student or educator, to be **BOLD**—Be Original, Leading Discovery. **BOLD**, after all, is your magazine. These are your stories, your experiences, and your successes.

In the first issue, we emphasized the notion that “our next generation will lead the technology advancement and lead the world in rapid change”. This second issue is dedicated to stories of how technology impacts the creation of a better community. One highlight of this issue is Andy's remarkable journey towards becoming a social entrepreneur. It was my pleasure to meet Andy just a few weeks ago. This bright young individual started out as an electrical engineer and is now a business student and social startup owner. His story demonstrates how one can use technology to bring dreams to life. I was particularly impressed by his view towards technology: “Whichever discipline one is pursuing, technology can elevate it to a higher level,” Andy explained. A friend of his studying linguistics (語 言 學) had queried if teaching was the only career open to a linguistics graduate. “Of course not,” Andy explained triumphantly. “It's because of linguists who infuse their expertise into technology, that we end up with valuable corpuses and exciting new products such as smart speakers (智能喇叭). Never underestimate any discipline—integrate the discipline with technology and let it shine!” Andy was right, indeed. While artificial intelligence made smart speakers possible, linguists turned smart speakers into a reality. Never underestimate any discipline!

CityU opens doors for dream chasers like Andy and you, to explore, innovate and provide impact to the community. CityU offers you opportunities to make your own discoveries, to become an innovator and entrepreneur. Turn to the next page and watch the happy faces of participants who had eye-opening experiences with the Bright Future Engineering Talent Hub during the recent Summer holiday.

I believe you will enjoy this magazine as much as the previous one. More importantly, I hope you will find interest in the **BOLD** opportunities CityU offers, and share the excitement of the students who came before you and who turned their dreams into an exciting career or into entrepreneurial successes. Be **BOLD**!

Bright Future Engineering Talent Hub: A STEM arena to Share, Train, Empower and Motivate

“Hey Siri, turn off the alarm...
I want some more sleep...”

“Hey Google,
tell me a joke.”

“Alexa, what is the
temperature now?”

Parents are probably familiar with hearing their children talking to AI assistants and seeing them spend more time on mobile devices than on anything else. People today seem to rely on technology more than ever.

AI and mobile devices are only two examples of how STEM seeps into almost every aspect of our daily lives. STEM stands for Science, Technology, Engineering, and Mathematics, which covers the knowledge and skills needed to better understand the world and to create a better world for present and future generations.

Can you imagine the modern world without STEM innovations: a world without clean and reliable energy sources or computers and telecommunication networks, a city without clean water and sewage drainage systems? Advances in STEM not only provide us with convenience and enjoyment but also safeguard our health and well-being.

STEM education matters

STEM education has been offered for decades worldwide. It focuses on interdisciplinary knowledge, problem-solving and innovation, giving students the chance to explore, experiment, integrate and apply what they learn.

Despite efforts to promote STEM education in Hong Kong, there is a general impression that the city is falling behind other developed countries or regions in STEM. And that students' interest, skills and knowledge in engineering are not as strong as they need to be to support long-term economic growth in Hong Kong.

“STEM indeed is the foundation to many professions; just to name a few – medicine, fintech, system analysis... Nearly every dream job that students mention relates to STEM. Participate in it early, have a taste of all the possibilities before you plan for your career. We want to nurture young engineering talents by allowing them to experience STEM in joyful and fun ways, and to provide them with accurate and timely information about the engineering profession.”

Professor Shek Chan-hung

*Acting Dean of CityU's College of Engineering and
Principal of the Bright Future Engineering Talent Hub*

A great opportunity for future engineers in Hong Kong

In keeping with its outreach theme, CityU has taken a BOLD step in establishing the Bright Future Engineering Talent Hub (“the Hub”), engaging a range of CityU engineering experts who share a vision of nurturing future engineers and supporting them to fulfil their dreams. The Hub looks to involve primary and secondary students in STEM activities, support teachers in understanding novel concepts and promote engineering among the public.

“Although science and mathematics subjects are built into the secondary school curriculum, engineering components are normally not covered extensively in secondary schools,” said Professor Shek, adding that “lively and in-depth STEM education will not only widen students’ horizons but also stimulate students’ interests in pursuing higher education in STEM-related disciplines.”

The Hub works closely with the Hong Kong Subsidized Secondary Schools Council to better understand the needs and interests of students so that it can design workshops and activities that stimulate students’ interest in engineering. A wide range of face-to-face activities has been organised, all of which emphasise the importance of hands-on exercises and interaction between people, which are especially needed with the shift to online and virtual experiences during the pandemic. The students also have the opportunities to expose themselves to a wide spectrum of engineering disciplines, such as materials science, mechanical engineering, and biomedical engineering, which are not usually covered in other STEM activities.

鵬程優才工程學庫
香港城市大學
City University of Hong Kong

The Bright Future Engineering Talent Hub has a vision to increase the impact of engineering in Hong Kong and beyond by nurturing new generations of engineers. The Hub was launched in 2021 by CityU's College of Engineering with generous support from the Bright Future Charitable Foundation. The College shares the aspiration of Dr Roy Chung, the Founder and Chairman of the Foundation, to promote engineering education in Hong Kong and make it a breeding ground for engineering professionals who will participate in the development of Hong Kong and the Greater Bay Area.

Learn by doing, grow by exploring

The Hub organises the Student Project Exhibition and STEM Carnival offering students with a wide range of STEM knowledge. Through hands-on exercises and demonstrations of the work of CityU students, the participants develop a better understanding of what STEM is about and the pathways to STEM careers.

The Student Project Exhibition is an important annual event to celebrate the success of CityU's engineering students and staff. An array of innovative projects with daily life applications are showcased in an interesting and lively manner throughout the two-day event. STEM workshops are also delivered by CityU professors for secondary students to engage in STEM activities.

Yannis Kwok, a student at the Daughters of Mary Help of Christians Siu Ming Catholic Secondary School, joined this year's exhibition and found it unforgettable: "I liked making a hand-powered centrifuge using paper. Not only was it fun, but I also learned something I didn't know before."

"This activity was a great way to enrich myself. Additionally, I was truly pleased to attend this event with my schoolmates, interact with many university students, and get to know the latest technological products in Hong Kong," she added.

Yannis Tong, a schoolmate of Yannis Kwok, said she was not very interested in engineering before the exhibition but had changed her mind after participating in the activities: "Although I didn't understand all the information, I still enjoyed my visit. My favourite exhibit was the one about building energy. All of us today are facing a big problem in global warming, and it is very hot nowadays. This project can help to reduce the heat from buildings."

At the STEM Carnival, students learn interesting and practical engineering techniques through professional laboratory visits and taking part in some experiments, and gain an awareness of the variety of engineering disciplines at CityU.

This summer, there were 17 workshops covering a broad spectrum of topics from 3D printing and robotics to LEGO programming and wind power. The participants print simple 3D polymeric models with different parameters and unlocking an understanding of the relationship between energy and climate change through LEGO building and programming activities.

Summer Research Internship: A taste of high-end engineering research

The Summer Research Internship, one of the many Hub events, is a valuable opportunity for Secondary 4 to 6 students with a strong STEM foundation to be attached to one of the departments of CityU's College of Engineering for around one month and participate in state-of-the-art research projects under the guidance of its professors. CityU students assist in the day-to-day supervision of the participants as peer mentors.

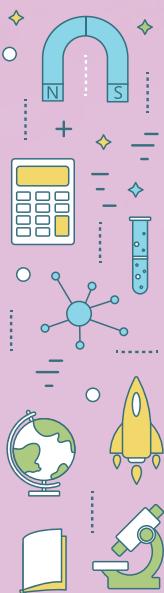

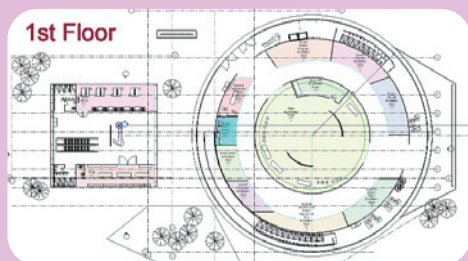

Kayla Yeung from King George V School was one of the 34 students who joined the Summer Research Internship this year. She conducted comprehensive and interesting research on using emerging technologies in the construction industry for the redevelopment of the Hong Kong Space Museum. Under the supervision of Dr Calvin Keung from the Department of Architecture and Civil Engineering, Kayla began with some background research to learn about the construction industry and the cutting-edge technologies that are being applied in the industry.

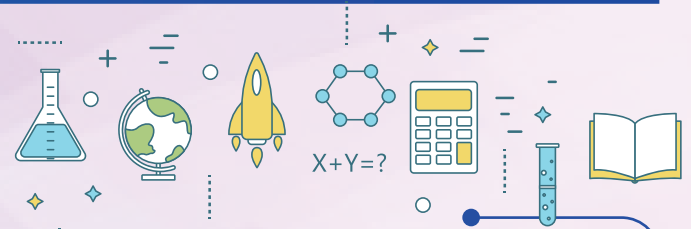

"I also had the marvellous experience of applying VR and AR technologies to the presentation of 3D architecture models. The sense of amazement that they gave me is unforgettable," Kayla said.

After conducting her research and learning about the available technologies, Kayla designed a new Space Museum. "Through the Summer Research Internship, I acquired skills like 3D modelling and researching. I also gained a deeper understanding of the construction industry and the cutting-edge topics and technologies within it. It guided me to form a clearer direction for my future career. I really appreciate having had this opportunity to learn and research at CityU's College of Engineering," she added.

Dr Keung commented that "Kayla is a clever student with a strong aesthetic sense. She constantly demonstrated creative ideas during the research internship. With her talent for architectural design, she was one of our unit's Best Design Award winners."

STEM Challenge: Teaming up to tackle engineering challenges

Another exciting activity organised by the Hub is the STEM Challenge, which is open to Secondary 1 to 6 students. Each team of students is assigned a CityU student as mentor to guide them through the design and execution of a small-scale research project. An academic staff member acts as an advisor to the team in case a higher level of support is needed. Students can choose from an extensive list of project themes or propose a topic of their own interest.

A group of five Secondary 6 students from Lai King Catholic Secondary School developed the Miracle Eyes, a smart object recognition device tailored to allow the visually impaired to stay away from obstacles nearby.

Carefully integrated various state-of-the-art technologies, such as the neural network model, AI recognition, edge impulse; and together with the many times of trial-and-error, the team successfully built the handy device with high accuracy and an app providing real-time notifications. The device can detect the distance between a user and the object, providing the visually impaired a very useful solution for daily life.

The team was grateful for the STEM Challenge for providing them with the opportunity to participate in STEM competitions and marked a meaningful end to their secondary study. *“There had been disagreement throughout the project, but it was through these situations that we shared our views, cooperated with each other, encouraged and supported each other, and learned how to respect and accept others’ opinions,”* the team added.

Mr Liu Man Cheong, the team’s secondary school teacher, was very much impressed by the team’s outstanding effort. “The performance of the team is excellent! With minimal advice and help, they managed to discuss and implement the project in a timely manner. They also had shown an innovative idea in mastering the novel AI object recognition technology to measure distance and angles between objects. The process and the result are very encouraging, and the product is potentially useful in many fields.”

“Before meeting with the mentees, I worried that I would not be able to provide them with enough information to support their discovery. I later found that I had no reason to be worried. The team finished all the paperwork and tests before our meetings. They researched on topics which seemed above their level of study, and their incredible problem-solving abilities led them to solutions to the many challenges we encountered. It was a fantastic experience for me to learn from them throughout the internship!”

Willy Wu

Student mentor from the Department of Architecture and Civil Engineering

“Some secondary students have sound STEM knowledge. Their abilities are beyond our expectations,” Professor Shek said. “Coding and programming are not new for them. As a generation that has grown up with readily available information on the internet, some of the students are very knowledgeable in their areas of interest. They also demonstrate creativity in designing their inventions. What they need is professional coaching to realise their potential in practice.”

“Beginners also did well in our workshops! They enjoyed the completion of the tasks with the guidance and instructions from our student helpers,” Professor Shek added. “In a nutshell, the Bright Future Engineering Talent Hub provides learning and exploration opportunities to students with a wide spectrum of prior knowledge. Every participant can benefit from the activities designed to nurture them to become the next generation of engineers.”

STEM education: learn together, bond together

“Understand what your students or children are learning to understand with their mind,” said Professor Shek, who as both an educator and a father tries to build bridges between the generations. With this in mind, the Hub also engages with teachers and parents, offering Teacher Update Courses, seminars and talks to share the latest information and skills they need to proactively cope with changes in teaching and learning. Career opportunities are also explained at these events.

Most of the trainers at Hub activities are university students. Not only do secondary students learn from peer mentors, but the mentors are also empowered to learn about themselves, grow in confidence and reach their potential – as the saying goes, “to teach is to learn”. The model now extends to the secondary and primary school sectors. One secondary school which participated in the Hub’s activities offers workshops to a few primary schools.

Professor Shek concluded: “STEM-related careers can also be challenging and rewarding. If you fancy becoming an IT professional, a biomedical engineer, an aerospace engineer or a professional engineer in other disciplines, prepare yourself now and dive into the exciting and forward-looking world of STEM. Don’t just dream about your future. Engineer your Bright Future!”

Stay connected with the Bright Future Engineering Talent Hub!

Are you one of the 700+ students or 90+ teachers we have met at our STEM activities?

No? Stayed tuned to our social media platforms for news on upcoming events!

Early Taste of your Dream

Exemplary original works produced by talented junior learners! Over a thousand learners from around the world kick-started their dream chasing journey via the CityU-Learning Classroom for Secondary School Students in this Summer vacation. These amazing illustrations, selected among the many submissions received, reflect learners' understanding and aspirations of the subject areas they have interest in. Do enjoy your reading, get inspired and let's begin the dream chasing journey.

Business

Is Accounting Tool to Fool?

Reflection/ Cherry (Cheng Wing Choi)

Is accounting tool to fool? -- CityU

What I have learnt from the class

- The role and importance of accounting in businesses: I've learnt that accounting is fundamental in learning about business and it is like a set of rules that govern the performance of firms.
- This lecture has truly broadened my horizons in the field of accounting and business. One of the many new things I've learnt is that accountants play an important role to provide accurate and honest financial information to users, not intentionally hiding any essential data. As demonstrated by the 2002 "whistleblower" case mentioned in the lecture, the business ethics of accountants are easily ignored yet very important.

How the class inspires me to innovate

- it provided me with a lot of timely information and real life examples applying to accounting. It offered me a brand new perspective to view the business world, like how things are different from what it seems to the public.

For example, a company might seem to be having an ideal growth of gross/net profit while in reality, it is suffering a loss. Therefore I'm inspired to train myself to become more observant in daily lives and more sensitive about such news related to the field.

It's great to learn that the lecture helps broaden your horizons in the field of accounting and business. I hope that you will further explore your road ahead, and (as you said) be more observant and sensitive to business news and happenings, which are indeed very relevant to our daily lives.

AI Creators, Data Mining and Copyright

AI Creators, Data Mining and Copyright

What is AI?

- mimics humans' mind like 'learning' and 'problem solving'
- replaces jobs by machines

Rembrandt

- a Dutch printer in the 17th century
- 'The Next Rembrandt' Project
- an AI-generated artwork
- consist of 148 million pixels

AI-Generated Works

poems
 novels
 news reports

What is Copyright ?

- protects the interests of the authors
- also include trademarks & patent

Can machines own the copyright?

NO!!
Even monkeys cannot own the copyright!

Knowledge that I've learnt from the course:

I really want to thank you for having this course! Through this course, I've known more deeply about the relationship between AI and copyright. AI can help human a lot and even can write poems, novels, invent new things, etc. However, they cannot own copyright. I want to express my own perspective from here. I think that artificial intelligence will be popularized in the next 10 years. They will write more poems, novels and invent more new machines. These works will be anonymous. I think that every brilliant works should have an owner and the owner of the machines can own the copyright. People may buy AI and they will protect their AI carefully. If their AI is damaged since they do not protect them, I don't think AI can invent new things or write beautiful poems and novels. Hence, I think it is possible that the owner of AI owns the copyright.

The Genetic Basis of Neurodevelopmental Disorders

Neurodevelopmental disorders

SUMMARY

Summary and review of a talk by Dr. Zhu from CityU

Types of genetic variants

- Point mutation
- Structural change
- By transmission
- De Novo mutation
- Somatic mutation

How can genetic variants be related to traits?

- Pleiotropy
- Polygenic inheritance

THIS DISORDERS ARE, IN FACT, VERY COMMON.

How common are these disorders?

As mentioned in the talk,

- 12-20% of our population suffer from lifelong MDD (Major Depression Disorder)
- Each of us on average has 3-4 million in total of point mutations, showing how common a rare variant can lead to these disorders

What I realised:

- Neurodevelopmental disorders are actually extremely common
- Yet, most of us don't even understand the situations

Thus, constant misunderstandings and discriminations occur, which are unfair to the patients at all, as most disorders are caused mainly by genetic variations.

POSSIBLE SOLUTIONS

- Public education
- Topics related should be included into school syllabus
- Featuring the topic more on news and podcasts
- Encouraging more investigation into developing precision treatments

Written by Stephanie Chu

CHU Yan Ching Stephanie

St Paul's Co-Educational College

It's a simple yet very concise illustration of the talk, and I am particularly happy to see your insights there too. I hope you will learn more about these conditions in the future, and help to fight against the stigma.

Dr. Zhu Xiaowei

Assistant Professor,
Department of Neuroscience

Social Science

Media Effects on Society

I attended the lecture offered by the Department of Media and Communication at City University of Hong Kong and I benefited a lot from the informative and interesting lecture.

Media plays an indispensable role in the society nowadays and it provides large amount of information and entertainment for us. Social media, in particular, provides a lot of advantages and convenience to our everyday life; meanwhile, we have to acknowledge the negative effects of social media. Today, media leads and gathers people from all around the world, enabling us to discuss and express our opinions on political, cultural, economic, social aspects etc. I can't even imagine a world without modern media.

In this lecture, I did not only learn about the media effects on society, but also realized that we are very much engaged in it. What impressed me most is the media leader effect. On social media, influencers, youtubers, celebrities, political leaders etc., they are the leaders who may affect our decisions such as in elections or voting. As Aaldering et al (2018) pointed out that "Most voters actually never meet party leaders in real life, and therefore, they form their judgments about them mainly on the basis of their representation in the media".

Another case is that people's decisions can be affected by the celebrities they support or follow; they might follow them by supporting their stances. As explained by Dr Kim, I realized that my decisions are often affected by the youtubers I like, especially those of my age. When I learnt from social media that Kim Nam Jun from BTS delivered speech at the United Nations, I listened to his full speech and agree to his opinion on #ENDviolence program to protect children and young people all over the world from violence.

Apart from the lecture, I also enjoyed the visit around the Department of Media and Communication. It's a great opportunity to learn more about this field. The settings and facilities were really fascinating and interesting, I can feel the passion of the students there. It was an enjoyable experience listening the lecture and exploring the department.

LI Ka Yi Angela
Po Leung Kuk Ngan Po Ling College

It was a great pleasure to read your reflection. Your paper shows a clear understanding of the topic of the lecture and delivers your thoughtful ideas about how the media affects our society and the way we live. Also, glad to hear that you have found this lecture interesting, and I hope you continue your study and career in this field.

Dr. KIM Ji Won

Assistant Professor,
Department of
Media and Communication

Social Welfare and People Living under Poverty

Social Welfare and People Living under Poverty

Poverty

- Absolute poverty** 絕對貧困: an individual / a family is unable to meet their basic needs
- Relative poverty** 相對貧困: an individual / a family is unable to afford the normal activities + opportunities that average earners have access to (fall below prevailing standards of living in a given societal context)
- Subjective poverty** 主觀貧困: level of poverty depends on the subjective interpretation of people

Policy Intervention

- non-recurrent cash measures
- Recurrent cash measures
- Means-tested in-kind benefits

Income Approach

- a designated income level
- a certain percentage of the median income, e.g. 50% of the median income in Hong Kong

Poverty Line 貧窮線: the upper limit of a certain proportion of wage earners (e.g. the lowest 10%)

Social Exclusion 社會排斥

- illustrates the process of marginalization or becoming poor
- individuals are wholly / partly excluded from participation in their society

Reflection

our globe has been facing many problems such as escalating wealth disparity and unaffordable energy. Poverty is still here in 2022. I, as a student, want to change the world by taking a step forward. It is easy for us to underestimate the small steps we take and question ourselves. However, a journey of a thousand miles begins with a single step, and every small step is a process of accomplishing change. In the future, I hope to motivate people surrounding me and tackle, stop, or reverse this challenge together.

HK Anti-poverty

- micro 微觀**: social work practice: direct service
- meso 中觀**: community economic development, increase social capital in poor communities to reduce poverty
- macro 宏觀**: policy advocacy, community education

More Inspiring
Reflections Here:

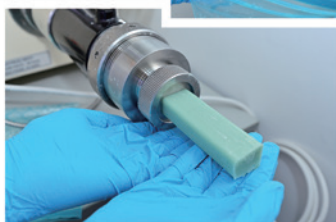

2-in-1 Shampoo & Conditioner Bars to Save the Environment

Wait! Shampoo in Bars? Conditioners in Bars?

How a soap bar is made?

Refining and extruding of 2-in-1 shampoo bar by soap plodder

Molding by soap press

Remember that moment when you walk into the bathroom of your hotel room and you see all those little bottles of toiletries? Shower gel, shampoo, condition, body lotion – can't wait to try them all! Yes, they're so inviting, but unfortunately they are also disposable single-use items. Did you know that these products are causing serious plastic pollution?

Believing that small steps can bring about big change, chemists at CityU are hard at work designing a new formula to make environmentally-friendly shampoo and conditioner. How does it work? Read on to learn more.

Alarm call to the world

The use of plastic is extraordinarily attractive as it is a versatile, lightweight, strong and inexpensive material. Unfortunately, because plastic is so durable it is also extremely slow to break down. This means that most of those empty little plastic bottles from hotel bathrooms end up as long-lasting waste in landfills or in the ocean, posing huge threats to wildlife and to human populations. Over a hundred million of these bottles are produced every year for single-use body care products. If we can reduce the amount of plastic packaging, especially for single-use products, we can significantly reduce the amount of plastic pollution in the world.

Solid, Packaging-free, 2-in-1 Shampoo & Conditioner Bars

The team of CityU chemists understands the importance of building an eco-friendly community, and at the same time ensuring everyone enjoys a comfortable hotel stay. The team therefore, in collaboration with the Ming Fai Enterprise, a leading bathroom amenity supplier to almost 60% of the hotels in China, is painstakingly designing a new formula to make solid, packaging-free 2-in-1 shampoo and conditioner bars¹. When these products are in the form of bars, the million plastic bottles will become obsolete. What a milestone for the hotel industry!

^[1] The project is supported by the Innovation and Technology Commission under the University-Industry Collaboration Programme.

The Challenge

Technically, the manufacture of a 2-in-1 shampoo and conditioner bar is challenging because conventional soap bars are derived from the salts of fatty acids. These have high pH values, which are harmful to the scalp.

The minimum requirements when developing a novel 2-in-1 shampoo and conditioner bar prototype are:

- A physical hardness similar to a conventional soap bar
- The entire manufacture process can be performed with conventional soap production lines without additional or unusual processing steps
- A scalp-friendly pH (5.5) level, with its detergency, foam quality, and effect on hair being comparable to conventional liquid shampoos
- A formulation which has a high ingredient tolerance, making the formulation extremely open to modification. This has already been proven by the successful incorporation of extracts from the *magnolia officinalis*, a traditional Chinese medicinal plant which contains the anti-inflammatory ingredients magnolol and honokiol.

In short, we are excited to develop our zero waste solid shampoo bar to serve as the perfect alternative to liquid bottled shampoo as it genuinely embraces the essence of sustainability. Very soon, whenever you go on staycation locally, or travel to other parts of the world, you will see these new 2-in-1 shampoo and conditioner bars when you enter your comfy hotel rooms! And when you do, do remember that **chemists are the heroes behind this eco-friendly community!**

Some secondary schools have had a taste of cosmetic chemistry at The 2nd Hong Kong Secondary School Cosmetic Formulation Competition. Why not you too?

Innovation Journey to be a Social Entrepreneur

Shy, quiet, socially inactive – if you meet Andy now, perhaps you do not believe that these were the characters people saw from Andy throughout his secondary education. Andy Wong, a Year-3 BBA Global Business Systems Management student, has transformed into a person who enjoys meeting and socialising with people from all walks of life. He has been awarded multiple CityU and external scholarships and innovation funds; and more importantly, he is achieving his dream to be a social entrepreneur. What brings Andy such a transformation?

“My dream is to build a sustainable, scalable business model to create impact on society.” Andy cheerfully shared his innovation journey. **“I saw that my friend, who’s a wheelchair user, encountered many difficulties in daily life. It brought me to build with my classmates an IoT device “Wheel Real Light” applying our electrical engineering knowledge. With this little device, my friend can alert others and ask for help in the event of emergency.”**

Wheel Real Experience: Experience the difficulties the disabled encounter every day; and cultivate an inclusive environment in the society.

Andy later also launched the “Wheel Real Experience”, a project with workshops hosted by wheelchair users aiming to allow a wider community experience what wheelchair users encounter everyday. “I hope that the wheelchair projects will create empathy, and eventually, inspire participants to reimagine how they can make a better environment for the disabled. My goal is also to create long-term career opportunities for the disabled, say by transforming them into STEM instructors.” Andy supplemented that he made sure every dollar was well spent on those in need. “The funds didn’t come from nowhere. I thank the CityU’s then SEED and HK Tech 300 funds, which made the projects possible; not to mention its guidance on proposal writing, pitching, and the connection with stakeholders.” The projects also attracted HK\$700K from various external sources, such as the Cyberport Creative Micro Fund.

Nothing Comes from Nowhere

Andy recalled that the secondary school classmates around him were all academically strong and presentable. To differentiate himself from the others, Andy joined different kinds of activities. Although “joining many activities” barely means an achievement, it was these activities which opened up his mind and horizons and paved the way for his dream to form.

*Never undermine yourself.
Set yourself a goal, and go for it!*

In the summer of Secondary 1 studies, Andy joined a YWCA leadership workshop where participants were mostly senior secondary students. He learnt a lot by observing what the seniors did. The next year he became a workshop organising committee member and went through the whole process of organising a leadership camp. “It’s life changing! It planted some seeds of my interest in project management”, Andy described.

Since then, he joined at least one activity every summer. His another significant experience was the visit to Mongolia under a UNICEF programme. “Children there didn’t even have a decent toilet. I from then realised how impactful the idea of “building something to make changes” was.”

The Mongolia trip explains why when Andy realised the need of his friend, he immediately grasped the resources CityU offered, and the University’s open environment to incubate ideas - he brought all his ideas to live!

Bitter Wisdom is Better than Sweet Folly

Social enterprises have a common challenge to secure fundings. Andy once had to do multiple part-time jobs to support his living, but thanks to the scholarships, he could financially support himself for university study as well as the exchange opportunities to the United States, United Kingdom and Canada. “Sometimes I look

back to those days that I ran short of money, and I felt it’s not a big deal – and that’s how I learnt to manage money.” He is optimistic as always.

Andy is now on a gap year where he spends majority of the time on a placement in cyber risk assurance, and the remaining to design how the projects should further develop. Though busy, orienteering, Thai boxing and canoeing are among a few of Andy’s hobbies. He particularly enjoys the process of solving problems logically, such as when being lost at orienteering, or being kicked hard during Thai boxing. “Stay calm, stay focused, and think through the possible solutions. Never take shortcuts because, in the end, shortcuts take you more time yet may not bring you to the destinations.” Andy is very positive that he would continue these meaningful projects even after graduation.

While we do not know how the projects will evolve, what we are very sure is that Andy, a logical and rational problem solver with a strong passion for doing something impactful, is walking closer step by step to realise his dream.

Wheel Real Experience

HK Tech 300

Are you one of those we have met?

Spend a day with the CityU community to gain an eye-opening opportunity to subjects beyond your imagination! We are happy to have tailored a number of activities in the past few months. Whether you joined us individually or in groups with your fellow classmates, we are sure you have had a valuable discovery experience!

CityU-Learning Classroom (Summer 2022)

Over 1,000 junior learners and 50 secondary school teachers had had a taste of CityU-learning in Summer. The classes cover a wide range of disciplines, including business, creative media, language, law, social sciences, STEM and life science. We are glad you like the classes!

Classes for Secondary Student

“Professor Yip explained both the mechanics and future of solar panel technologies and brought the actual solar panels live to give students a better understanding on how the models looked, worked, differed, and improved from the previous model. The live demonstration made the talk more engaging and thought-provoking.”

– From a student of “Solar Energy: An Important Renewable Energy Source for Carbon Neutrality” class

“Dr. Wong has a lot of interactions with us, and encouraged us to voice out our opinions, which was very warming and made the whole lecture extremely enjoyable. Moreover, the use of a lot of cases helped us, as beginners, to understand easier and provoked my interest to dig deeper into the subject.”

– From a student of “Is Accounting Tool to Fool?” class

Classes for Secondary School Students

Classes for Secondary Student Teachers

“I learnt more about what machine learning is and some of its interesting applications.”

– From a participant of “One Step Forward: From DSE Mathematics to Decision-making and Machine Learning” class

“I learnt how to make use of the corpus database to enhance my teaching and administrative work.”

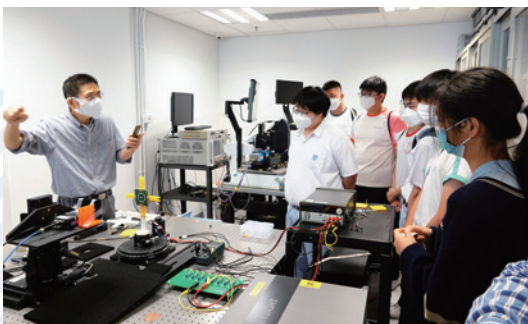

– From a participant of “Data-driven Learning: “Asking” Language Questions to Online Corpora” class

Taster Programme

A warm welcome to students from Ma On Shan Tsung Tsin Secondary School! The half-day tour in July 2022 introduced students to the state-of-the-art technology of the College of Engineering, College of Liberal Arts and Social Sciences and School of Energy and Environment. We are sure everyone had had an eye-opening tour with us!

Life Science - Visit from Hong Kong Brain Bee Competition Finalists

Organised by the Hong Kong Brain Foundation, the Competition was held to motivate secondary school students to know more about brains. It was a fruitful tour for the finalists of the Competition to visit the Department of Neuroscience in July 2022. They learnt more about epilepsy and different methods of advanced microscopy for the acquisition and analysis of cellular imaging of neurons in the brain.

Law - Summer Workshop on Law and Technology 2022

The Workshop in June 2022 covered multiple activities, including a seminar on Law and Technology sharing how technology is affecting legal studies and the legal profession, and a mooting demonstration during which the participants discussed with current CityU students a topical problem on business disruption due to Covid-19. A taster interactive lecture “Why Do We Need the Law of Evidence?” and introduction to School of Law’s programmes were given too.

😊 Missed the chance to join these events?

No worries! Turn to the next page to see what're upcoming!

We Look Forward to Seeing You

If...

you are looking for a discipline that could best fit you for your university study

you are planning for your career path

you are advising your students on their university choices

Why not have a taste of the disciplines yourself, explore all the possibilities before you make your choices?

Come and join the following activities dedicated for YOU!

INFORMATION DAY

22 October 2022

Beyond Boundaries

2022 CityU Information Day

Visit us in person or join us virtually online to know more about CityU's exciting programmes!

Activity Highlights:

- Programme talks hosted by Colleges and Schools
- Talks on our joint degree programmes with overseas universities
- Facility tours and workshops (mostly on-campus)
- Admission consultations
- Sharing by students and alumni on their university life, internship and student exchange experiences

Date: 22 October 2022

Time: 10am – 6pm

Venue: In-person on CityU campus or online

Registration: <https://www.cityu.edu.hk/admo/infoday/>

Popular Science Talks

The CityU College of Science offers a wide range of online and in-person series. Secondary schools are welcome to contact us for tailor-made talks at your school.
